

# **Pressure Filters**

# D 042 · D 062

- In-line mounting
- Operating pressure up to 100 bar
- Nominal flow rate up to 90 l/min

# Description

#### Application

In the pressure circuits of hydraulic and lubrication systems.

#### **Performance features**

Protection

| FIOLECLION         |   |
|--------------------|---|
| against wear:      | By means of filter elements that, in full-flow filtration,<br>meet even the highest demands regarding cleanliness<br>classes.   |
| Protection against |   |
| malfunction:       | Through installation near to the control valves or other expensive components. The specific determined flow rate guarantees a closed by-pass valve even at $v \leq 200 \text{ mm}^2/\text{s}$ (cold start condition). |

### Filter elements

Flow direction from outside to centre. The star-shaped pleating of the filter material results in:

- large filter surfaces
- low pressure drop
- high dirt-holding capacities
- long service life

#### Filter maintenance

By using a clogging indicator the correct moment for maintenance is stated and guarantees the optimum utilization of the filter life.

### Materials

| Filter head:  | Aluminium alloy  |
|---------------|--|
| Filter bowl:  | Aluminium alloy  |
| Seals:        | NBR (FPM on request)   |
| Filter media: | EXAPOR <sup>®</sup> MAX 2 - inorganic multi-layer microfibre web |
|               | Paper - cellulose web, impregnated with resin                    |

#### Accessories

Electrical and/or optical clogging indicators are available - optionally with one or two switching points resp. temperature suppression. Dimensions and technical data see catalogue sheet 60.30.

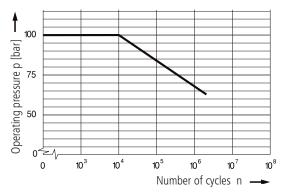

# Characteristics

#### **Operating pressure**

0 ... 63 bar, min. 3 x  $10^6$  pressure cycles Nominal pressure according to DIN 24550

0 ... 100 bar, min.  $10^4$  pressure cycles Quasi-static operating pressure

#### Permissible pressures for other numbers of cycles

#### Nominal flow rate

Up to 90 l/min (see Selection Chart, column 2) The nominal flow rates indicated by ARGO-HYTOS are based on the following features:

- closed by-pass value at  $v \le 200 \text{ mm}^2/\text{s}$
- element service life > 1.000 operating hours at an average fluid contamination of 0,07 g per l/min flow volume
- flow velocity in the connection lines: up to 100 bar  $\leq$  6 m/s

#### **Filter fineness**

 $5 \mu$ m(c) ... 30 μm(c) β-values according to ISO 16889 (see Selection Chart, column 4 and diagram Dx)

#### **Dirt-holding capacity**

Values in g test dust ISO MTD according to ISO 16889 (see Selection Chart, column 5)

#### Hydraulic fluids

Mineral oil and biodegradable fluids (HEES and HETG, see info-sheet 00.20)

#### Temperature range

-30 °C ... +100 °C (temporary -40 °C ... +120 °C)

#### Viscosity at nominal flow rate

- at operating temperature:  $v < 60 \text{ mm}^2/\text{s}$
- as starting viscosity:
- at initial operation:

 $v_{max} = 1.200 \text{ mm}^2/\text{s}$ 

The recommended starting viscosity can be read from the diagram D (pressure drop as a function of the kinematic viscosity) as follows: Find the 70 %  $\Delta p$  of the cracking pressure of the by-pass valve on the vertical axis. Draw a horizontal line so that it intersects the  $\Delta p$  curve at a point. Read this point on the horizontal axis for the viscosity.

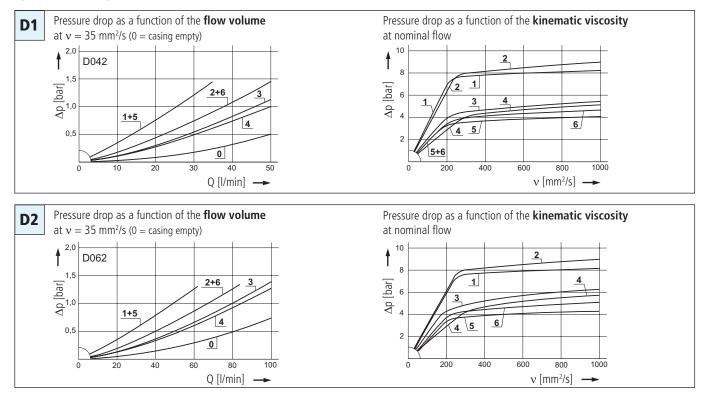

#### Mounting position

Preferably vertical, filter head on top

### Connection

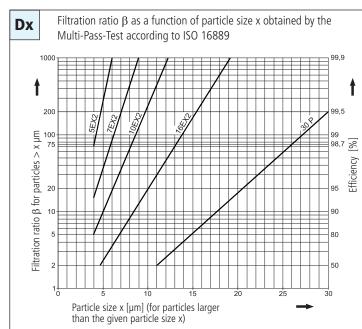

Threaded ports according to ISO 228 or DIN 13. Sizes see Selection Chart, column 6 (other port threads on request).

### Diagrams

#### $\Delta p$ -curves for complete filters in Selection Chart, column 3

#### Filter fineness curves in Selection Chart, column 4

The abbreviations represent the following  $\beta\mbox{-values}$  resp. finenesses:

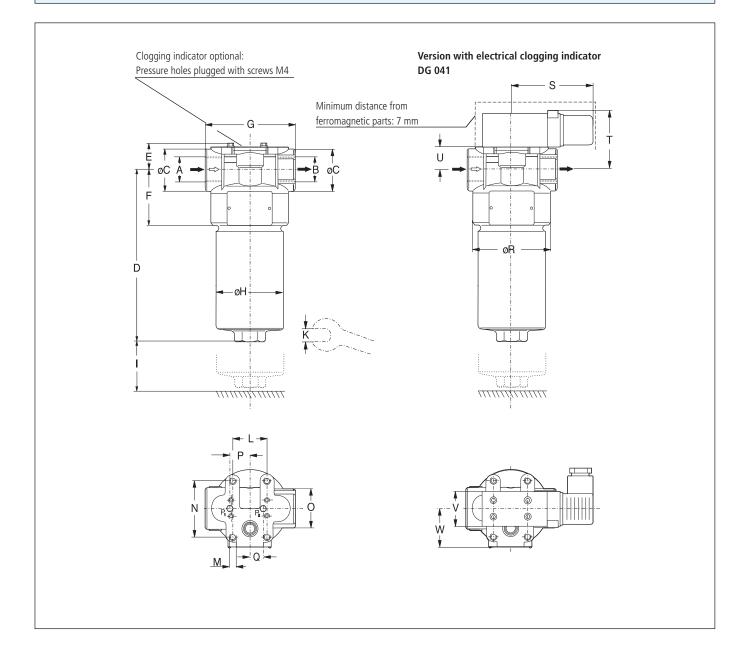

#### For EXAPOR<sup>®</sup>MAX 2 and Paper elements:

Based on the structure of the filter media of the 30P paper elements, deviations from the printed curves are quite probable.

For special applications, finenesses differing from these curves are also available by using special composed filter media.

### **Spare Parts**

| Pos. | Designation                 | Part No.           |
|------|-----------------------------|--------------------|
| 1    | Filter bowl D 042           | D 044.0101         |
| 1    | Filter bowl D 062           | D 064.0101         |
| 2    | O-ring 50 x 2               | N007.0501          |
| 3    | Filter element (with seal)  | see Chart / col. 9 |
| 4    | Hexagonal head screw M4 x 8 | 11385800           |
|      | DIN 933-8.8                 |                    |
| 5    | Bonded seal 4,1 x 7,2 x 1   | 12504600           |

The functions of the complete filters as well as the outstanding features of the filter elements assured by ARGO-HYTOS can only be guaranteed if original ARGO-HYTOS spare parts are used.

## **Quality Assurance**

#### Quality management according to DIN EN ISO 9001

To ensure constant quality in production and operation, ARGO-HYTOS filter elements undergo strict controls and tests according to the following ISO standards:

| ISO 2941 | Verification of collapse/burst pressure rating            |
|----------|---|
| ISO 2942 | Verification of fabrication integrity (Bubble Point Test) |
| ISO 2943 | Verification of material compatibility with fluids        |

| ISO 3968  | Evaluation of pressure drop versus flow characteristics |
|-----------|---|
| ISO 16889 | Multi-Pass-Test (evaluation of filter fineness and      |
|           | dirt-holding capacity)                                  |
| ISO 23181 | Determination of resistance to flow fatigue using high  |
|           | viscosity fluid   |

Before release into the series production the filter casing is tested for fatigue strength in our pressure pulse test rig. Various quality controls during the production process guarantee the leakfree function and solidity of our filters.

Our engineers will be glad to advise you in questions concerning filter application, selection as well as the cleanliness class of the filtered medium attainable under practical operating conditions.

Illustrations may sometimes differ from the original. ARGO-HYTOS is not responsible for any unintentional mistake in this specification sheet.

#### We produce fluid power solutions
